

PZSL POZIDRIV COMBINATION HEAD SCREWDRIVERS **SDCPZ-SL**

Professional SCREWDRIVERS

	Head type identification codes
	Blue - "Pozidriv" combination head

The Cembre range of insulated screwdrivers have dual-compound handgrips and an ergonomic design making them particularly practical and comfortable in the following modes of use:

- > Normal
- > Fast
- > Forced

To ensure quick identification, the type and size of the head are indicated in different colours on the back of the handle.

The heads are made from Chromium Molybdenum steel with a hardness of 55-59 HRC and are hardened with Phosphoric Manganese Acid to increase corrosion resistance; the size of the insulating cover allows it to be inserted into tight spaces.

Each individual screwdriver is tested in accordance with **EN 60900**.
